

## FULL CONE NOZZLES

## CAS

## CLUSTER NOZZLE/STANDARD SPRAY

CAS multiple full cone nozzles can produce very fine droplets using only hydraulic pressure.

Their full cone spray pattern results from the interaction of several hollow cone sprays, whose number (NR) is stated in the capacity table below.

Since the droplet size depends among other factors upon the nozzle size, these multi-orifice nozzles produce a finer spray than a standard full cone single-orifice nozzle working at the same pressure and delivering the same quantity of liquid.

## FULL CONE NOZZLES

CAY

## CLUSTER NOZZLE / WIDE ANGLE SPRAY

CAY multiple full cone nozzles can produce very fine droplets using only hydraulic pressure.

Their full cone spray pattern results from the interaction of several hollow cone sprays, whose number (NR) is stated in the capacity table below.

Since the droplet size depends among other factors upon the nozzle size, these multi-orifice nozzles produce a finer spray than a standard full cone single-orifice nozzle working at the same pressure and delivering the same quantity of liquid. The design of CAY nozzle bodies produces a wide angle spray while maintaining the fine droplet dimensions.
